

SUPER FROZEN ALBACORE TUNA

Item Name: Super Frozen Albacore Tuna

INTRODUCTION

Albacore tuna is a tuna species found throughout the world's warm and tropical waters. It is lighter in colour, firmer and also milder in flavour than other species of tuna.

As soon as the tuna is caught, the blood is drained and stored in a super freezer to capture the freshness. We then process the fish in a low-temperature environment. Our Albacore Tuna has a soft texture and buttery flavour due to its time living in warm, open waters. It is also 100% natural as it is not treated with any chemicals.

- Origin: Vancouver, BC
- Wild Caught
- Processed in Taiwan
- No Chemical Treated
