

SUPER FROZEN HIRAME

Item Name: Hirame Fillet

INTRODUCTION

Hirame or 'Japanese turbot' is a flatfish that is usually found in the Pacific and Atlantic Oceans. Unlike other types of sashimi, Hirame has 'hagotai' (which means 'bite'). The texture is slightly crunchy and chewy, which brings out the sweetness of the fish with every bite.

Our Hirame is tasteless smoked and does not contain any bones and skin, which means there will be no waste at all. This product is easy to use, and the biggest advantage is that it saves time and labour.

- Origin: Kagoshima
- Aquaculture
- Super Frozen
